PROFESSIONAL SUMMARY

AI Engineer with hands-on experience building LLM-powered systems, agentic RAG pipelines, and high-volume automation workflows. Delivered 10+ production AI systems for US/UK clients, including a platform processing 30K+ leads. Strong computer science fundamentals with IEEE-published research experience.

EDUCATION

Varendra University, Rajshahi, Bangladesh
Bachelor of Science in Computer Science and Engineering

Jan 2022 – Feb 2026
CGPA: 3.96/4.00

SKILLS

Languages	Python, JavaScript, SQL, C++
AI/ML	LLMs, RAG, GraphRAG, Agentic Systems, Prompt Engineering, Computer Vision, Predictive Modeling, Vector Embeddings
Frameworks	LangChain, LangGraph, LlamaIndex, PyTorch, TensorFlow, Scikit-learn
Data & Database	PostgreSQL, Supabase, Neo4j, Pinecone
Systems & Cloud	FastAPI, Docker, GCP, n8n, GitHub Actions

WORK EXPERIENCE

AI Engineer, Softvence IT Ltd (softvence.agency)

December 2025 – Present

- Built and deployed an AI outbound calling platform processing 30K+ leads using Vapi, Twilio, HubSpot, n8n, and GPT, automating lead qualification and broker routing.
- Engineered production-grade workflow orchestration systems on self-hosted VPS infrastructure with Docker and n8n, supporting retry scheduling, concurrent execution, and CRM synchronization.
- Developed AI-powered document automation pipelines using Gemini and Telegram integrations to extract logistics data and generate structured PDF invoices automatically.
- Designed intelligent monitoring and booking automation systems with real-time alerts.
- Built scalable multi-source data synchronization and ETL pipelines integrating POS systems, databases, and external APIs for real-time business operations.

PROJECTS

ErosionKG: GraphRAG Knowledge System for Land Management

Live | [GitHub](#)

- Developed ErosionKG, a GraphRAG-based knowledge system that transforms geoscience literature into a queryable knowledge graph for multi-hop reasoning and evidence-based land management, achieving 63.5% higher context recall and 76.9% citation accuracy over baseline RAG using hybrid graph + vector retrieval.

Peyechi: AI Product Recommendation System

Live | [GitHub](#)

- Developed Bangladesh's first AI-powered smartphone discovery platform featuring natural language recommendations, AI-generated phone summaries, pros/cons analysis, and comparison verdicts through a RAG-based recommendation pipeline built with FastAPI, Supabase, Redis, and LLM-driven semantic retrieval.

FinShield: Agentic RAG for Financial Fraud Detection

Live | [GitHub](#)

- Developed FinShield, an agentic RAG system for real-time multilingual financial fraud detection using LangGraph and hybrid SQL, Neo4j, and vector retrieval, with optimized LLM pipelines for caching, rate limiting, and token reduction.
